

```
int gcd(int a, int b) {
    if(a>0 && b>0) {
        if(a<b) return gcd(a,b-a);
        else if(b<a) return gcd(b,a-b);
        else return a;
    }
    else return -1;
}
#include<stdio.h>
#include<stdlib.h>
int main(int argc, char *argv[]) {
    int a = 10, b = 15;
    if(argc>1) a = atoi(argv[1]);
    if(argc>2) b = atoi(argv[2]);
    return printf("gcd(%d,%d)=%d\n",a,b,gcd(a,b));
}
```
